

How will Process Safety Regulatory Evolution Impact your PSM Data Management Strategy?

Process Safety Management Continuous Improvement Roadmap

Is your PSM process both challenging and resource intensive or incomplete and difficult to interpret?

Is it taking you too long to get an MOC, corrective action or incident routed/approved?

If you answered yes to any of the above, then why not come and learn how leading companies are realizing the benefits of moving toward an integrated software solution that addresses your PSM processes?

Webinar Objectives

This webinar will give you some ideas on how to begin putting together a 5-10 year roadmap to move toward an integrated data management strategy that underpins your key Process Safety Management elements. We will also reveal some ways to minimize the effort to keep your software evergreen, while keeping your culture aligned with technology as it continues to evolve. The Baker Panel Report and OSHA Petroleum Refinery PSM National Emphasis Program (NEP) present some new challenges in ensuring that you are leveraging good engineering practices to timely manage your process safety information and to enhance your compliance assurance.

Key Features

- Overview of how other integrated oil & gas and chemical companies are tackling core PSM information management processes
- Beginning to define a 5-10 year roadmap for automating PSM
- Baker Panel Report and NEP implications to PSM data management
- How to integrate PSM with an overall EHS Management Information System (EMIS) Strategy
- How to frame up meaningful metrics and examples of PSM cockpits
